Why Should I consider Wrapping after a Joint Injection?

**Bacteria**
- $10^5$ CFU/gram of tissue cause infection
- Can be quantified to assess bacterial load
- Source of Septic arthritis in horses

**Wrapping**
- Protect injection site from contamination
- Easy to apply
- Minimal Cost

**Joint Injection**
- Common procedure in working horses
- Used in the treatment of Osteoarthritis
- Most common joints affected - front coffin and hock
- Possibility of producing septic arthritis

**Possible Infection**

**Medical Practice**

**Overall Equine Health**

**Preventing contamination**
